Corn Germ Meal or Hominy Hearts? This is an old feed, but comparatively new to feeders on account of it always having been exported to Germany and other European countries. On account of the war this can not now be done, and it is being introduced in this country. This is the greatest hog and dairy feed manuactured today. It is made out of nothing but the heart of the grain, only one and one-half to two pounds out of a bushel of corn. It is the residue after the oil is pressed out, just like Cotton Seed Meal is made. That is why it is called Germ Meal or Hominy Hearts. We are buying the output now of two different mills. They do not all manufacture exactly alike. Owing to this difference in manufacture some of it is rather sweet and some has a somewhat burnt taste. We call them White and yellow, although both are brown in color. But the White is made from White Corn and is sweet and brings more money than the other.

It can be fed either dry or wet, but it is preferable to feed in a slop or mash form, as it takes up lots of water and makes a splendid mash. There is no danger of safe product, and the more that is feed (within reason) the greater will be the gain and the bigger and more healthy will be the animal.

For production of flesh and bone and rapid growth it has no equal. It is also more economical to feed than corn, after the animal has attained its growth, on account of the greater protein content, which element is absolutely necessary for the formation of meat of better quality. It is also cheaper than corn itself because it is a by-product. The main products from the grain of corn perhaps paying for the corn, so the meal can be sold very cheaply, considering the feeding value.

Fashions Show Our Intellectual Development

By HAROLD H. CORYELL, Boston, Mass.

difference in fashions from Secondary one season to the next but for the peculiar fashions of different nations. But too many reasons spoil the argument—especially when contradictory reasons are given for the same thing. For instance, the Chinese insist upon their women being covered even to the tips of their fingers for modesty's sake and to lessen carnal interest, while the Turk hides all but the eyes to create a mystery and arouse interest, saying that we Westerners have so many divorces because we tire of seeing too much of each other.

We claim to wear clothes for the same reasons as the Chinese—for propriety. Why do our men, then, not dress like monks, and our women like nuns, instead of indulging in quarterly changes of fashion which serve many ministers with matter for sermons on salaciousness? All this, to say nothing of the shock European evening gowns give the modest Japs, who think nothing of mixed bathing in the nude.

Some, like the Eskimo, wear clothes for warmth. There do not seem to be many changes in fashion among them, so I suspect their fashions of being truly an index of intelligence. On the other hand, I am told that the sturdy Patagonians of the almost frigid tip of South America wear only finery and remove it when bad weather might ruin it.

The more I read of the fashions in dress of various races the more I am perplexed by the reasons men give for the clothes they wear. There are so many reasons that none seem to indicate intelligence on the part of the giver.

But these are only the reasons they give, and we all know that the reasons we give are seldom the real ones. If the reasons man gives for fashions in clothes speak poorly for his claim to be a rational creature. still less do some of the reasons which we find are at the bottom of the vital questions as to how far from the ground a skirt shall hang, how many inches it shall be at the bottom, what the prevailing color shall be, etc., or whether the trousers men wear after the sunset gun shall have braid at the seam and pockets at the side and whether decorum above the waist shall be preserved by a two-button pearl-gray vest, or by a fourbutton white one previously soaked in cornstarch paste.

The changes in fashions do show intelligence, however, in their makers. Not because they make clever fashions but because they convince people that the best way to show they have plenty of money is to spend it all on clothes. Some people judge a man's purse by whether he wears a single-breasted coat or a double-breasted one.

Fight Colds With Fresh Air and Exercise

By Miriam M. Haynes, Colorado Agricultural College, Fort Collins, Colo.

Probably more people suffer from colds during February and March than at any other time. We feel a sudden chill and say we "are taking cold." The chill is the effect, not the

Are fashions in dress an

index of intelligence?

Rather of a lack of it. Not

that there are not plenty of

cause, for the cold has already been taken. It is "risky" to neglect colds, for it is one of the earliest symptoms of pneumonia, bronchitis and influenza. These diseases prevail more in winter because people are brought into more confined relations and the transmission of these diseases becomes more easy and frequent. They affect chiefly those of indoor life and occupation. Those who are most exposed to the weather are least likely to have them.

Good ventilation is our most important preventive and plenty of fresh air is absolutely necessary all of the time.

Rooms that are heated and lighted with gas or oil need special attention for their proper ventilation.

In every sleeping room the window sash should be lowered at the top and raised at the bottom during sleeping hours. Sleep is always more refreshing in a cold room. A close sleeping room is dangerous.

Best tonic is fresh air.

The best restorative is sleep.

The best stimulant is exercise.

Fatigue calls for rest, not the spur.

Endurance of Soldiers Is Amazing

By DR. S. A. SARGETICH, Washington, D. C.

<u>***************************</u> Military observers in Europe have been astonished at the endurance of the soldiers in the western theater of the European war.

The weather during the

and thousands of soldiers had their feet frozen. In one hospital, which has 500 beds, the feet of more than seventy soldiers had to be amputated. Various experiments were made to discover some foot covering that would prevent freezing, but none has been discovered. It was agreed by physicians that nothing in the way of shoes, socks, boots or leggings will prevent freezing. It is a condition due to chilling of the whole body, which reduces circulation, and the immediate covering of the feet will not stop it. Surgeons have recommended that orders be issued to soldiers in the trenches in very cold weather to stamp their feet to keep their blood in circulation. This or other exercise is the only way to keep the blood in circulation.

Many cases were reported in the Serbian campaign of soldiers who, in desperation because of the hardships, deliberately took off their shoes and allowed their feet to freeze in order to be sent to a hospital. It is a remarkable fact that no Serbian soldiers were in this class. Indeed, the Serbian soldiers, in my judgment, are the most stoical of the war.

Some Women Are Benefited By Fads

By C. P. GILMORE, Baltimore, Md.

Fads have been frowned upon and laughed at, but a fad has often caused a woman to forget mental and physical ills.

The strongest-hearted of become discour-

aged and weary. Life for very many of us is made up of very many commonplace things—the same work from day to day, the same associates, the same surroundings, and the woman who has lost her first youth yet must keep her place in the vast commercial arena should have, indeed must have, some interests outside of her work.

Do not feel embarrassed if your friends should hear you have "gone in for a fad." Go right ahead, regardless of their criticism. The woman who belittles another tired woman who takes up a fad is generally very much in need of adopting one herself.

Anything that serves any kind of legitimate purpose is most commendable, and any little fad that will help to make a woman stronger, either mentally or physically, is far more than its name infers-it is in all truth a blessing in disguise.

FORETHOUGHT BEST IN FRUIT GROWING

Comparative Growth of Trees Planted in Blasted and Unblasted Holes.

(By CHARLES F. HIGGS.) A good deal of money has been

made in fruit growing. A good deal has been lost, too. The losses have been mainly by the men who have been in too great a hurry to garner the profits they have heard successful growers were making.

These get-rich-quick fellows have blindly and eagerly bought raw land, incumbered with stumps and niggerhead bowlders. Forgetting, or possibly not knowing, that good cultivation is necessary in a crowded orchardcrowded by interplanting peaches between apples-they have set their trees without stopping to clear off the stumps and bowlders. The results have been disastrous for them.

Some have tried to correct their initial mistake by buying stump-pullers to dispose of the stumps, but lack of space to operate the machines has made this plan ineffective.

Failing in this, some of the more energetic men have tried to cultivate by hand, digging around the trees. Practical fruit growers will appreciate what an endless, impractical task this is in a large orchard.

Many trees in these hurry-up orchards have died, and the apples that have been grown on trees that managed to survive have been stunted, knotty and of generally such poor quality that they can be marketed only to vinegar makers. Some of these growers have become discouraged and allowed their orchards to grow weeds, sprouts and briars; in fact, they are practically a total loss.

One of these men recently consulted me about his orchard. I found it located on a hillside literally covered with pine, white and rock oak, hickory and other stumps as well as numerous bowlders.

and rocks with dynamite. He was afraid it would injure his trees. convinced him the trees would never | man.

could make it possible to cultivate them with horse-drawn machinery, and he finally decided to take a chance.

Having used dynamite considerably, I agreed to do the blasting for this man. I employed two helpers to make the bore holes under the stumps and rocks. For the larger stumps, a soil auger was used; for the smaller ones and the stones, a pointed steel bar and sledge. I followed these men loading the holes with the charges of dynamite.

Only one of the young fruit trees was injured by the blasting, because true of the niggerheads.

low the surface. thoroughly.

After seeing this hardpan, the own-

Some time later, when I was in the vicinity, I visited this orchard; found the stump and bowlder fragments all hauled off, the ground nicely cultivated and the trees looking fine and rapidly growing into money.

PREPARATIONS FOR GOOD HONEY HARVEST

Courtesy of Gleanings in Bee Culture.

An Orchard is About the Best Location for a Bee Yard.

(By C. E. SANBORN, Department of Entomology, Oklahoma A. & M. College, plus honey. Otherwise, if they be-Stillwater.)

Bees properly handled will in most instances supply the owner's family with honey throughout the year. Sugar is a sort of substitute for honey. Sugar is not as easily assimilated as honey. Children have a natural appetite for sweets that should be satiated. The same is true of the majority of people. Honey should not be allowed to go to waste in the ungathered state when there exists such a continuous demand for sweets.

Examine each colony; if the bottom board is littered with dead bees and honey cappings, sweep it and make it clean. If any webs, webworms or moths are found in the hive, be very careful to remove them. After a colony in the hive is found to be in good shape, see to it that there are no obstructions near the entrance that will check workers as they come and go.

All hives of dead bees should be removed from the bee yard. They should be thoroughly cleaned and stored away in a dry room where dust, mice and spiders cannot locate. Frames having well-formed combs should be saved. Frames containing irregularly formed combs, drone cells or work of the bee moth should be rendered and marketed as beeswax. Nearly all bee supply dealers will pay cash or trade comb foundation for it.

As soon as the cells near the top bars of the frame have been filled

plus honey. Otherwise, if they become crowded, they will have a tendency to swarm. The swarming tendency should be averted as much as possible. Swarming generally means less surplus honey.

Supers having full-length frames instead of pound sections are preferable for surplus honey in Oklahoma. If the frames have previously been stored with honey and properly cared for, there will remain an inch strip of honeycomb attached to the full length of the top bar. The bees will complete a comb much quicker by having a starter of this kind, and the comb will be straighter than in a frame where no starter is present.

In case the bees do swarm, the old hives placed in storage as mentioned will be all ready for hiving them. Preparation for hiving bees should always be made in advance. The use of an old soap box or nail keg as a hive for bees not only shows poor respect for the bee and beekeeping in general, but it also shows one of the worst forms of poor management on the part of the owner. Honey obtained from such a fixture (if obtained at all) is of a very inferior grade on account of the hatching of the young bees in the cells of the combs before the honey is stored therein.

From two to four colonies of bees properly handled will, in most cases, supply the owner's table with honey throughout the year. Why continue with honey and capped, it is time that to ship additional tons of sugar into the supers should be placed on the the country every year when additionbrood chambers. The workers will al tons of sugar are going to waste?

DRINKING DISCOURAGED.

'The men who drink alcoholic liquors, even if they are not known to become drunk, are not advanced to responsible positions."-A. M. Byers Company, Pittsburgh, Pa.

"In our work we cannot use a man who drinks liquor. Men who use it at all are not in a condition to work anywhere in it with the man who lets it alone. We hope the traffic in liquors will soon be voted out of existence."-McInnes Steel Company, Ltd., Corry,

"The efficiency of a man is reduced in exact proportion to the amount of alcohol he drinks. The total abstainer ranks above the moderate drinker in reliability and efficiency in all classes of work nearly as much as the moderate drinker does above the heavy regular drinker."-Follansbee Furnace Company, Follansbee, W. Va.

"We give bonuses to abstainers among our foremen. Our aim is to keep our organization free from liquor and we base this upon its commercial value to us." - Delaware River Steel Company, Chester, Pa.

"Moderate drinking is detrimental to efficiency and reliability."-Penn Steel Castings and Machine Company, Chester, Pa. "Drinking, even moderately, inter-

feres with efficiency and reliability."-Nicetown Plate Washer Company, Nicetown, Philadelphia, Pa. "No one remains a moderate drinker. They either stop altogether or become heavy drinkers. We discharge without mercy men who report for work under the influence of liquor."-

Company, Harrisburg, Pa. "We use every moral force to keep men out of saloons and we never advance any man who drinks."--Wyoming Shovel Works, Wyoming. Pa.

Harrisburg Pipe and Pipe-Bending

We know from general observation that a man's efficiency is reduced 30 to 50 per cent through the use of al-cohol."—David Bradley Manufacture ing Works, Bradley, Ill.

CAUSE OF LOWEST DEATH RATE. Why has Kansas the lowest death rate in the United States? This question was asked by doubting federal officials after they had investigated the report of W. J. V. Deacon, state registrar of vital statistics, showing that the Kansas death rate was only 9.8 per 1,000. The answer of Mr. Deacon as given to Samuel L. Rogers, directors of the United States bureau of census, gave this reason among oth-

"Kansas is a prohibition state and has been for a generation, and in Kansas, prohibition really prohibits. I do not mean by this there is no alcohol consumed in the state, but the absence of the saloon means much to our growing boys and young men, who, in the absence of any bar room, find more healthful pastimes than loaf-

ing in an alcohol laden atmosphere. "Another and more important fact concerning prohibition is that the wage of the laborer or mechanic is not dissipated, but goes to supply those necessities of food, clothing and housing most essential to the wellbeing of their families and themselves."

EDITOR'S CHANGE OF HEART.

During the wet and dry campaign of the state of Washington, the Seattle Daily Times worked vigorously for the wets. After one month of prohibition this is what the editor said

"We fought prohibition on economic grounds alone. We believed that in a great seaport city with a population of upwards of 300,000, prohibition would be destructive; that it would bring on economic disaster. We believed that under the license system we had the liquor trafic as well controlled as it could be; we wanted to let it alone and we fought as hard as we could fight. But in spite of all we could do, prohibition carried and went into effect January 1. Its moral effect has been tremendous. Seattle had 260 saloons and we had an average of 2,600 arests a month for crimes and misdemeanors growing out of liquor drinking. In January we had only 400 arrests and 60 of these were made January 1, and were the result of hang-overs from the old year."

PROHIBITION AND TAXES.

Kansas wet, in 1880, had a tax rate of 5.5 mills on the dollar. Kansas City dry, in 1914, had a rate of 1.2 mills. Wet Nebraska has increased her tax rate from 3.9 in 1880 to 7.8 mills in 1914. Atlanta, Ga., is larger than Toledo, O., and nearly as large as Columbus, O. Dry Atlanta's tax rate is \$7.50 per thousand, while the rate in wet Columbus is \$13.50 per thousand, and in wet Toledo \$14 per thou-

SALOONS AND TAX RATE.

In Circleville, Ohio, in 1911, the last in a three-year dry period, the tax rate was \$11.20 on a thousand dollar valuation. In 1913, under saloons, the tax rate increased to \$11.80, and this year the rate is \$11.90.

Mandy had "dished up" my onesome unch, but still she lingered near. "Well, Mandy, what is it?" I asked,

recognizing the symptoms. She giggled consciously. Miss Ethel, couldn' yo' lend me a p'ar red stockin's?"

"Red stockings, Mandy? Are you going to a party?"

She became impressively solemn at once. "Oh, no, miss. Ah's gwine to

a fun'al." "But, Mandy, red stockings at a funeral! Everybody always wears black at funerals.

'Yes'm. Ah knows, miss-" she hesitated-"but yo' see, Ah expects to prostrate mahself on de grave."-New York Evening Post.

Rabbits Stall Stagecoach.

George Crowell, stage driver on the route from Austin to Potts, is authority for the statement that his team was stalled on the home trip at Hot Springs, east of Spencers, by an army of jack rabbits. He said they resembled a drove of sheep, and leaped into the tall sage when finally scared away. -Austin (Nev.) Dispatch to New York

Her Love Hung on a Hair. "I see where a Detroit wife left her husband because he wore a wig." "Pshaw! that was but a bald ex-

MEAL-TIME CONSCIENCE. What Do the Children Drink?

There are times when mother or father feeds the youngsters something that they know children should not have. Perhaps it is some rich dessert but more often it is tea or coffee.

It is better to have some delicious, hot food-drink that you can take yourself and feed to your children, conscious that it will help and strengthen, but never hurt them.

A Yorkstate lady says: "I used coffee many years in spite of the conviction that it injured my nervous system and produced my nervous headaches. While visiting a friend I was served with Postum and I determined to get a package and try it myself. The result was all that could be desired—a delicious, finely flavored, richly colored beverage. Since I quit cof-fee, Postum has worked wonders for

"My husband, who had suffered from kidney trouble when drinking coffee, quit the coffee and took up Postum with me and since drinking Postum he has felt stronger and better, with no indication of kidney trouble.

"You may be sure I find it a great comfort to have a warm drink at meals that I can give my children, with a clear conscience that it will help and not hurt them as coffee or tea would."

Name given by Postum Co., Battle Creek, Mich.

Postum comes in two forms:

Postum Cereal-the original formmust be well boiled. 15c and 25c pkgs. Instant Postum—a soluble powder dissolves quickly in a sup of hot water, and, with cream and sugar, makes delicious beverage instantly. 30c and 50c tins.

Both forms are equally delicious and cost about the same per cup. "There's a Reason" for Postum. -sold by Grocers. Combination of Silk and Crepe

skirt of crepe or chiffon. The com- cut to correspond with this shape. bination is a favorite which achieves noon frock. It has several small peculiarities that give it a flavor entirely out of the ordinary. One of them is evident in the bodice. which looks like a coatee of silk with drop shoulders, and another appears in the fullness of the corded ruffles and the way Between these groups, hardly discernible in the picture, there is an added row black lace insertion are set to the underside of the chiffon, since fashion refuses to countenance a lack carry it.

in double-breasted effect. Its peplum ruching made very full. is a mere plaited frill at the sides and cuff finished with a ruche. It will be crispness is an advantage.

A little silk goes a long way when | noticed that they are shaped to bag it is ruffled four times about a full over the elbow and that the cuff is

The narrow ruffles are made to new triumphs in this elegant after- stand out from the skirt by the cording at their hems, and they are fulled over a cord also. The frock is simple but original, showing an ingenious handling of the modes. It presents many advantages to the woman who may wish to remodel a dress made of a thin material, as voile, organdie or in which they are set on in two groups. | marquisette. The small coatee of taffeta and the taffeta ruffles will go well with these and with heavier materials, decoration. Bow-knot motifs of nar- or the finer lace flouncings may be used for the skirt.

Ruches of taffeta frayed out at the edges are used on many new models of ornament where there is space to ir gowns and coats and on negligees. In light-colored changeable taffeta The coatee, or bodice, has a V- the effect is very pretty when the shaped neck and fastens to one side edges are frayed and the box-plaited

Other silk will serve for coatee and back headed by a narrow belt of the ruffles in making a frock like the one silk which does not extend across the pictured. The corded edges will give front. There are four small prettily the right set to the ruffles, even in a decorated buttons of glass at the soft silk or satin, in case one wishes front. The sleeves of chiffon are long to use a material of this kind already full puffs that reach below the elbow on hand. But if new material is to be and they are set into a wide flaring bought it might as well be taffeta; its

Admits of Quick Hairdressing

Health for Sick Women

For Forty Years Lydia E. Pinkham's Vegetable Compound Has Been Woman's Most Reliable Medicine -Here is More Proof.

To women who are suffering from some form of woman's special ills, and have a constant fear of breaking down, the three following letters ought to bring hope:-

North Crandon, Wis. - "When I was 16 years North Crandon, Wis.—"When I was 16 years old I got married and at 18 years I gave birth to twins and it left me with very poor health. I could not walk across the floor without having to sit down to rest and it was hard for me to keep about and do my work. I went to a doctor and he told me I had a displacement and vlcers, and would have to have an operation. This frightened me so much that I did not know what to do. Having heard of Lydia E. Pinkham's Vegetable Compound I thought I would give it a trial and it made me as well as ever. I cannot say enough in favor of the Pinkham remedies."—Mrs. Mayme Asbach, North Crandon, Wis.

Testimony from Oklahoma.

Lawton, Okla.—"When I began to take Lydia E. Pinkham's Vegetable Compound I seemed to be good for nothing. I tired easily and had headaches much of the time and was irregular. I took it again before my little child was born and it did me a wonderful amount of good at that time. I never fail to recommend Lydia E. Pinkham's Vegetable Compound to ailing women because it has done so much for me."—Mrs. A. L. McCasland, 509 Have St., Lawton, Okla.

From a Grateful Massachusetts Woman.

Roxbury, Mass.—"I was suffering from inflammation and was examined by a physician who found that my trouble was caused by a displacement. aown and sluggish liver. I tried several kinds of medivegetable Compound. It has cured me and I am pleased to be in my usual good health by using it and highly recommend it."—Mrs. B. M. Osgood, 1 Haynes Park, Roxbury, Mass.

If you want special advice write to Lydia

A Neutral. "Pa, what is a neutral?" "One who has friends in both trenches."

Logical Result. "Nobody likes the umpire." "It's the logical result of trying to be strictly neutral."

A Famous Physician's Wonderful Discovery

After a series of careful experiments and tests at the Invalids' Hotel and Surgical Institute, Buffalo, N. Y., covering many years—Dr. Pierce, the medical director of that hospital, made announcement that he could prove that a medicine which he called "ANURIC" was the best uricacid solvent now to be had. As a remedy for those easily recognized symptoms of inflammation—as scalding urine, backache and frequent urination, as well as sediment in the urine, or if uricacid in the blood has caused rheumatism, lumbago, sciatica, gout, it is simply wonderful how quickly "Anuric" acts; causing the pains and stiffness rapidly to disappear.

Swollen hands, ankles, feet are due to a dropsical condition, often caused by disordered kidneys. Naturally when the

the Presbyterian Church at Matthews. The principal speakers were Mrs.

N. B. Leslie, pastor of the Baptist Church in the Shreiner Auditorium at Taylor in Gas City and a noted Sunday School worker, and Prof. Newton Wray of Taylor University. Mrs. Leslie spoke on "Church and S. S. Finance" and "Graded Work in the S. S." This was a splendid and inspiring lecture for any Christian Worker. Prof. Wray took as his subject 'A Lively Sunday School." He made clear that there is a vast difference between a "live" school and a "lively" school. He said that any Sunday School that did not see some of its scholars converted during the year could scarcely be called a "live school," even if it did have

a large attendance and a "lively" time. Delegates chosen to represent the Association at the state convention at Muncie in June were, W. E. Yeater, Mrs. Geo. Barrett and Mrs. Chas. Byal. Officers for next year were chosen as follows: President W. E. Yeater Chas. Byal
